Microsoft

Exam Questions 70-742

Identity with Windows Server 2016
NEW QUESTION 1
Your company recently deployed a new child domain to an Active Directory forest.
You discover that a user modified the Default Domain Policy to configure several Windows components in the child domain.
A company policy states that the Default Domain Policy must be used only to configure domain-wide security settings.
You create a new Group Policy object (GPO) and configure the settings for the Windows components in the new GPO.
You need to restore the Default Domain Policy to the default settings from when the domain was first installed.
What should you do?
A. From Group Policy Management, click Starter GPOs, and then click Manage Backups.
B. From a command prompt, run the dogpofix.exe command.
C. From Windows PowerShell, run the Copy-GPO cmdlet.
D. Run ntdsutil.exe to perform a metadata cleanup and a semantic database analysis.

Answer: B

NEW QUESTION 2
Your network contains an Active Directory forest named contoso.com. The forest contains 10 domains. The root domain contains a global catalog server named DC1.
You remove the global catalog server role from DC1.
You need to decrease the size of the Active Directory database on DC1.
Solution: You restart DC1 in Directory Services Repair Mode. You run compact.exe, and then restart DC1. Does this meet the goal?
A. Yes
B. No

Answer: B

Explanation:
You need to run ntdsutil.exe with the ‘compact to’ option. References:
https://theitbros.com/active-directory-database-compact-defrag/

NEW QUESTION 3
Your network contains an Active Directory domain named contoso.com.
You have a Group Policy object (GPO) named GPO1. GPO1 is linked to an organizational unit (OU) named OU1.
GPO1 contains several corporate desktop restrictions that apply to all computers. You plan to deploy a printer to the computers in OU1.
You need to ensure that any user who signs in to a computer that runs Windows 10 in OU1 receives the new printer. All of the computers in OU1 must continue to apply the corporate desktop restrictions from GPO1.
What should you configure?
A. a user preference and a WMI filter on GPO1.
B. a computer preference that uses item-level targeting
C. a computer preference and WMI filter on GPO1
D. a user preference that uses item-level targeting

Answer: D

NEW QUESTION 4
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. The computer account for Server1 is in organizational unit (OU) named OU1.
You create a Group Policy object (GPO) named GPO1 and link GPO1 to OU1.
You need to add a domain user named User1 to the local Administrators group on Server1. Solution: From a domain controller, you run the Set-AdComputer cmdlet.
Does this meet the goal?
A. Yes
B. No

Answer: B

NEW QUESTION 5
You use Application Request Routing (ARR) to make internal web applications available to the Internet by using NTLM authentication.
You need to replace ARR by using the Web Application Proxy. Which server role should you deploy first?
A. Active Directory Lightweight Directory Services
B. Active Directory Rights Management Services
C. Active Directory federation Services
D. Active Directory Certificate Services

Answer: C

NEW QUESTION 6
You create a user account that will be used as a template for new user accounts.
Which setting will be copied when you copy the user account from Active Directory Users and Computers?

Your Partner of IT Exam
We recommend you to try the PREMIUM 70-742 Dumps From Exambible
https://www.exambible.com/70-742-exam/ (285 Q&As)

A. the Department attribute
B. the Description attribute
C. Permission
D. Remote Desktop Services Profile

Answer: A

Explanation:
A user template in Active Directory can be used if you are creating users for a specific department, with exactly the same properties, and membership to the same user groups. A user template is nothing more than a disabled user account that has all these settings already in place.

References:

NEW QUESTION 7
Your network contains an Active Directory forest. Some users report experiencing difficulties signing in to domain controllers. You suspect that the service location (SRV) records might be causing the issue. What are two possible commands that you can run to verify the SRV records? Each correct answer presents a complete solution.

NOTE. Each correct selection is worth one point.

A. dcdiag.exe /test:connectivity
B. dnscmd /info
C. dnscmd /DirectoryPartitionInfo
D. dcdiag.exe /test:dns /DnsRecordRegistration
E. dcdiag.exe /test:dns
F. dnscmd /IPValidate

Answer: BD

Explanation:

NEW QUESTION 8
Your network contains an Active Directory domain named contoso.com. The user account for a user named User1 is in an organizational unit (OU) named OU1. You need to enable User1 to sign in as user1@adatum.com.

Solution: From Windows PowerShell, You run Set-ADUser User1 –UserPrincipalName User1@Adatum.com. Does this meet the goal?

A. Yes
B. No

Answer: A

NEW QUESTION 9
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a server named Web1 that runs Windows Server 2016. You need to list all the SSL certificates on Web1 that will expire during the next 60 days. Solution: You run the following command.

Get-ChildItem Cert:\LocalMachine\My |? { $_.NotAfter –It (Get-Date).AddDays( 60 ) } Does this meet the goal?

A. Yes
B. No

Answer: B

NEW QUESTION 10
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a server named Web1 that runs Windows Server 2016. You need to list all the SSL certificates on Web1 that will expire during the next 60 days. Solution: You run the following command.

Get-ChildItem Cert:\LocalMachine\My |? { $_.NotAfter –It (Get-Date).AddDays( 60 ) } Does this meet the goal?

A. Yes
B. No

Answer: B

NEW QUESTION 11
Your network contains an Active Directory forest. The forest contains two domains named litwareinc.com and contoso.com. The contoso.com domain contains two domain controllers named LON-DC01 and LON-DC02. The domain controllers are located in a site named London that is associated to a subnet of 192.168.10.0/24. You discover that LON-DC01 is not a global catalog server. You need to configure LON-DC02 as a global catalog server. What should you do?

A. From Active Directory Sites and Services, modify the NTDS Settings object of the London site.
B. From Windows Power Shell, run the Enable-ADOptionalFeature cmdlet.
C. From the properties of the LON-DC02 computer account in Active Directory Users and Computers modify the NTDS settings.
NEW QUESTION 12
Your company has a marketing department and a security department. The network contains an Active Directory domain named contoso.com. The domain contains an enterprise certification authority (CA). You have two organizational units (OUs) named MKT_UsersOU and MKT_ComputersOU. MKT_UsersOU contains the user accounts for the users in the marketing department. MKT_ComputersOU contains the computer accounts for the computers in the marketing department. A Group policy object (GPO) named GPO1 is linked to MKT_UsersOU. A GPO named GPO2 linked to MKT_ComputersOU. You plan to deploy a web application for the marketing department users. The application will require certificates for authentication. The security department configures the CA to support the planned deployment. You need to ensure that the web application can authenticate the marketing department users. What should you do?

A. From the User Configuration node of GPO1, create an Internet Setting preference.
B. From the User Configuration node of GPO1, configure the Certificate Services Client - Auto enrollment settings.
C. From the Computer Configuration node of GPO2, configure the Certificate Services Client - Certificate Enrollment Policy settings.
D. From the Computer Configuration node of GPO2, create the Automatic Certificate Request Settings.

Answer: A

NEW QUESTION 13
Your network contains an Active Directory domain named contoso.com. The domain functional level is Windows Server 2012 R2. You need to secure several high-privilege user accounts to meet the following requirements: What should you do?

A. Create a universal security group for the user accounts and modify the Security settings of the group.
B. Add the users to the Windows Authorization Access Group group.
C. Add the user to the Protected Users group.
D. Create a separate organizational unit (OU) for the user accounts and modify the Security settings of the OU.

Answer: C

NEW QUESTION 14
You have a Nano Server named Nano1 that runs Windows Server 2016. Nano1 is deployed to a virtual machine and is a member of a workgroup. You need to join Nano1 to a domain named contoso.com. Which two commands should you run? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
NEW QUESTION 15
You create a user account that will be used as a template for new user accounts. Which setting will be copied when you copy the user account from Active Directory Users and Computers?

A. Published Certificates
B. the Member of attribute
C. the Office attribute
D. the Description attribute

Answer: B

NEW QUESTION 16
Your network contains an Active Directory forest. The forest contains two domains named contoso.com and fabrikam.com. The functional level of the forest and the domains is Windows Server 2008 R2. You have a global group named Group1 in the contoso.com domain. Group1 contains the user accounts in contoso.com. You need to ensure that you can add the user accounts in the fabrikam.com domain to Group1. What should you do?

A. Run the Set-LocalGroup cmdlet.
B. Assign the Domain Controllers group in fabrikam.com permissions to Group1
C. Modify the scope of Group1 to Domain local.
D. Change Group1 to a distribution group.

Answer: C

NEW QUESTION 17
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.
Your network contains an Active Directory domain named contoso.com. The domain contains a single site named Site1. All computers are in Site1. The Group Policy objects (GPOs) for the domain are configured as shown in the exhibit. (Click the Exhibit button.)
The relevant users and client computer in the domain are configured as shown in the following table.

<table>
<thead>
<tr>
<th>Object name</th>
<th>Object type</th>
<th>Object location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer</td>
<td>Computer</td>
<td>OU4</td>
</tr>
<tr>
<td>User1</td>
<td>User</td>
<td>OU4</td>
</tr>
<tr>
<td>User2</td>
<td>User</td>
<td>OU2</td>
</tr>
</tbody>
</table>

End of repeated scenario.
You plan to enforce the GPO link for A6.
Which five GPOs will apply to User1 in sequence when the user signs in to Computer1 after the link is enforced? To answer, move the appropriate GPOs from the list of GPOs to the answer area and arrange them in the correct order.
NEW QUESTION 18
You have an enterprise certification authority (CA). You create a global security group named Group1. You need to provide members of Group1 with the ability to issue and manage certificates. The solution must prevent the Group1 members from managing certificates requested by members of the Domain Admins group.

Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

A. From the CA properties, modify the Policy Module settings.
B. From the Certificate Templates console, modify the Security settings of the Administrator certificate template.
C. From the CA properties, modify the security settings.
D. From the CA properties, modify the Enrollment Agents settings.
E. From the CA properties, modify the Certificate Managers Settings.
F. From the Certificate Templates console, modify the Security settings of the User certificate template.

Answer: A

Explanation:
NEW QUESTION 19
Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. You install IP Address Management (IPAM) on Server1. You select the automatic provisioning method, and then you specify a prefix of IPAM1. You need to configure the environment for automatic IPAM provisioning. Which cmdlet should you run? To answer, select the appropriate options in the answer area.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 20
Your network contains an Active Directory domain named adatum.com. The domain contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Domain controller</td>
</tr>
<tr>
<td>Server2</td>
<td>Network controller</td>
</tr>
<tr>
<td>Server3</td>
<td>Network Policy Server (NPS) server</td>
</tr>
<tr>
<td>Server4</td>
<td>Active Directory Federation Services (AD FS) server</td>
</tr>
<tr>
<td>Server5</td>
<td>Host Guardian Service (HSG) server</td>
</tr>
</tbody>
</table>

You have a server named Server6 in the perimeter network. Each server has the local users show in the following table.
You install a Web Application Proxy on Server6.
You need to configure the Web Application proxy on Server6. The solution must use the principle of least privilege.
Which account should you specify in the Web Application Proxy Configuration Wizard? To answer, select the appropriate options in the answer are.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A
Explanations:
The user account used to configure the web application proxy must have local Administrator permission on the WAP server(s), and have access to an account that have local Administrator permissions on the AD FS servers.

About Exambible

Your Partner of IT Exam

Found in 1998

Exambible is a company specialized on providing high quality IT exam practice study materials, especially Cisco CCNA, CCDA, CCNP, CCIE, Checkpoint CCSE, CompTIA A+, Network+ certification practice exams and so on. We guarantee that the candidates will not only pass any IT exam at the first attempt but also get profound understanding about the certificates they have got. There are so many alike companies in this industry, however, Exambible has its unique advantages that other companies could not achieve.

Our Advances

* 99.9% Uptime
  All examinations will be up to date.

* 24/7 Quality Support
  We will provide service round the clock.

* 100% Pass Rate
  Our guarantee that you will pass the exam.

* Unique Guarantee
  If you do not pass the exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!
NEW QUESTION 1
Your company recently deployed a new child domain to an Active Directory forest. You discover that a user modified the Default Domain Policy to configure several Windows components in the child domain. A company policy states that the Default Domain Policy must be used only to configure domain-wide security settings. You need to restore the Default Domain Policy to the default settings from when the domain was first installed. What should you do?

A. From Group Policy Management, click Starter GPOs, and then click Manage Backups.
B. From a command prompt, run the dcgpofix.exe command.
C. From Windows PowerShell, run the Copy-GPO cmdlet.
D. Run ntdsutil.exe to perform a metadata cleanup and a semantic database analysis.

Answer: B

NEW QUESTION 2
Your network contains an Active Directory forest named contoso.com. The forest contains 10 domains. The root domain contains a global catalog server named DC1. You remove the global catalog server role from DC1. You need to decrease the size of the Active Directory database on DC1. Solution: You restart DC1 in Directory Services Repair Mode. You run compact.exe, and then restart DC1. Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
You need to run ntdsutil.exe with the 'compact to' option. References: https://theitbros.com/active-directory-database-compact-defrag/

NEW QUESTION 3
Your network contains an Active Directory domain named contoso.com. You have a Group Policy object (GPO) named GPO1. GPO1 is linked to an organizational unit (OU) named OU1. GPO1 contains several corporate desktop restrictions that apply to all computers. You plan to deploy a printer to the computers in OU1. You need to ensure that any user who signs in to a computer that runs Windows 10 in OU1 receives the new printer. All of the computers in OU1 must continue to apply the corporate desktop restrictions from GPO1. What should you configure?

A. a user preference and a WMI filter on GPO1.
B. a computer preference that uses item-level targeting
C. a computer preference and WMI filter on GPO1
D. a user preference that uses item-level targeting

Answer: D

NEW QUESTION 4
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory domain named contoso.com. The computer account for Server1 is in organizational unit (OU) named OU1. NEW QUESTION 8
Your network contains an Active Directory domain named contoso.com. The user account for a user named User1 is in an organizational unit (OU) named OU1. You need to enable User1 to sign in as user1@adatum.com. Solution: From Windows PowerShell, you run Set-ADUser User1 –UserPrincipalName User1@Adatum.com. Does this meet the goal?

A. Yes
B. No

Answer: A

NEW QUESTION 8
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Web1 that runs Windows Server 2016. You need to list all the SSL certificates on Web1 that will expire during the next 60 days. Solution: You run the following command.

Get-ChildItem Cert:\LocalMachine\My |? { $_.NotAfter –It (Get-Date).AddDays( 60 ) } Does this meet the goal?

A. Yes
B. No

Answer: B

NEW QUESTION 10
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains two domain controllers named DC1 and DC2. DC1 holds the RID master operations role. DC1 fails and cannot be repaired. Solution: On DC2, you open the command prompt, run dsmgmt.exe, connect to DC2, and use the Seize RID master opinion. Does this meet the goal?

A. Yes
B. No

Answer: B

NEW QUESTION 11
Your network contains an Active Directory forest. The forest contains two domains named litwareinc.com and contoso.com. The contoso.com domain contains two domain controllers named LON-DC01 and LON-DC02. The domain controllers are located in a site named London that is associated to a subnet of 192.168.10.0/24. You discover that LON-DC02 is not a global catalog server. You need to configure LON-DC02 as a global catalog server. What should you do?

A. From Active Directory Sites and Services, modify the NTDS Settings object of the London site.
B. From Windows PowerShell, run the Enable-ADOptionalFeature cmdlet.
C. From the properties of the LON-DC02 computer account in Active Directory Users and Computers modify the NTDS settings.

Answer: A, B, C
D. From the properties of the LON-DC02 computer account in Active Directory Users and Computers, modify the City attribute.

Answer: C

NEW QUESTION 12
Your company has a marketing department and a security department.
The network contains an Active Directory domain named contoso.com. The domain contains an enterprise certification authority (CA).
You have two organizational units (OUs) named MKT_UsersOU and MKT_ComputersOU. MKT_UsersOU contains the user accounts for the users in the marketing department. MKT_ComputersOU contains the computer accounts for the computers in the marketing department.
A Group policy object (GPO) named GPO1 is linked to MKT_UsersOU. A GPO named GPO2 linked to MKT_ComputersOU.
You plan to deploy a web application for the marketing department users. The application will require certificates for authentication.
The security department configures the CA to support the planned deployment.
You need to ensure that the web application can authenticate the marketing department users. What should you do?

A. From the User Configuration node of GPO1, create an Internet Setting preference.
B. From the User Configuration node of GPO1, configure the Certificate Services Client - Auto enrollment settings.
C. From the Computer Configuration node of GPO2, configure the Certificate Services Client - Certificate Enrollment Policy settings.
D. From the Computer Configuration node of GPO2, create the Automatic Certificate Request Settings.

Answer: A

NEW QUESTION 13
You need to secure several high-privilege user accounts to meet the following requirements: What should you do?

A. Create a universal security group for the user accounts and modify the Security settings of the group.
B. Add the users to the Windows Authorization Access Group group.
C. Add the user to the Protected Users group.
D. Create a separate organizational unit (OU) for the user accounts and modify the Security settings of the OU.

Answer: C

NEW QUESTION 14
You have a Nano Server named Nano1 that runs Windows Server 2016. Nano1 is deployed to a virtual machine and is a member of a workgroup.
You need to join Nano1 to a domain named contoso.com.
Which two commands should you run? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
NEW QUESTION 15
You create a user account that will be used as a template for new user accounts. Which setting will be copied when you copy the user account from Active Directory Users and Computers?

A. Published Certificates
B. the Member of attribute
C. the Office attribute
D. the Description attribute

Answer: B

NEW QUESTION 16
Your network contains an Active Directory forest. The forest contains two domains named contoso.com and fabrikam.com. The functional level of the forest and the domains is Windows Server 2008 R2.
You have a global group named Group1 in the contoso.com domain. Group1 contains the user accounts in contoso.com. You need to ensure that you can add the user accounts in the fabrikam.com domain to Group1. What should you do?

A. Run the Set-LocalGroup cmdlet.
B. Assign the Domain Controllers group in fabrikam.com permissions to Group1
C. Modify the scope of Group1 to Domain local.
D. Change Group1 to a distribution group.

Answer: C

NEW QUESTION 17
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.
Start of repeated scenario.
Your network contains an Active Directory domain named contoso.com. The domain contains a single site named Site1. All computers are in Site1. The Group Policy objects (GPOs) for the domain are configured as shown in the exhibit. (Click the Exhibit button.)
The relevant users and client computer in the domain are configured as shown in the following table.

<table>
<thead>
<tr>
<th>Object name</th>
<th>Object type</th>
<th>Object location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer</td>
<td>Computer</td>
<td>OU4</td>
</tr>
<tr>
<td>User1</td>
<td>User</td>
<td>OU4</td>
</tr>
<tr>
<td>User2</td>
<td>User</td>
<td>OU2</td>
</tr>
</tbody>
</table>

End of repeated scenario.
You plan to enforce the GPO link for A6.
Which five GPOs will apply to User1 in sequence when the user signs in to Computer1 after the link is enforced? To answer, move the appropriate GPOs from the list of GPOs to the answer area and arrange them in the correct order.
A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 18

You have an enterprise certification authority (CA). You create a global security group named Group1. You need to provide members of Group1 with the ability to issue and manage certificates. The solution must prevent the Group1 members from managing certificates requested by members of the Domain Admins group. Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

A. From the CA properties, modify the Policy Module settings.
B. From the Certificate Templates console, modify the Security settings of the Administrator certificate template.
C. From the CA properties, modify the security settings.
D. From the CA properties, modify the Enrollment Agents settings.
E. From the CA properties, modify the Certificate Managers Settings.
F. From the Certificate Templates console, modify the Security settings of the User certificate template.
NEW QUESTION 19
Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. You install IP Address Management (IPAM) on Server1. You select the automatic provisioning method, and then you specify a prefix of IPAM1. You need to configure the environment for automatic IPAM provisioning. Which cmdlet should you run? To answer, select the appropriate options in the answer area.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 20
Your network contains an Active Directory domain named adatum.com. The domain contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Domain controller</td>
</tr>
<tr>
<td>Server2</td>
<td>Network controller</td>
</tr>
<tr>
<td>Server3</td>
<td>Network Policy Server (NPS) server</td>
</tr>
<tr>
<td>Server4</td>
<td>Active Directory Federation Services (AD FS) server</td>
</tr>
<tr>
<td>Server5</td>
<td>Host Guardian Service (HSG) server</td>
</tr>
</tbody>
</table>

You have a server named Server6 in the perimeter network. Each server has the local users show in the following table.
The domain contains the users shown in the following table.

<table>
<thead>
<tr>
<th>User Name</th>
<th>Member of</th>
</tr>
</thead>
<tbody>
<tr>
<td>User1</td>
<td>Administrators</td>
</tr>
<tr>
<td>User2</td>
<td>Power Users</td>
</tr>
<tr>
<td>User3</td>
<td>Network Configuration Operators</td>
</tr>
<tr>
<td>User4</td>
<td>Cryptographic Operators</td>
</tr>
</tbody>
</table>

You install a Web Application Proxy on Server6.
You need to configure the Web Application proxy on Server6. The solution must use the principle of least privilege.
Which account should you specify in the Web Application Proxy Configuration Wizard? To answer, select the appropriate options in the answer area.

Answer: A
Explanation:
The user account used to configure the web application proxy must have local Administrator permission on the WAP server(s), and have access to an account that have local Administrator permissions on the AD FS servers.
